PLUS®

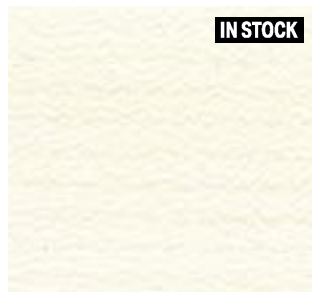

SOLIDS

Webblon Coastline Plus® fabric is a high-performance PVC composite. It features a strong polyester-base fabric, with manageable weight for excellent dimensional stability. The top surface is treated with the Rain Kleen® finish for color retention and prolonged fabric life. Coastline Plus is UV, water and mildew resistant. It is also heat-sealable for a strong, waterproof and airtight seal, and it accepts a variety of graphics including pressure-sensitive graphics.

# FLAME-RESISTANT VINYL BY PANORAMA<sup>FR</sup> by STRATAGLASS<sup>TM</sup>

CLEAR

**WARNING:** Any widths between 240" and 300" with vinyl screen - SunPro will manufacture but not warrant.

## Vinyl Protection All-Weather Control

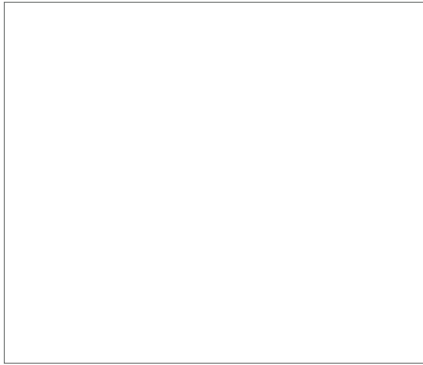

For ultimate protection against the elements, SunPro offers vinyl products through Weblon® Coastline Plus® Fabric and PanoramaFR flame-resistant clear vinyl by StrataGlass™. Primarily used in commercial spaces, this product can offer a real return on investment to a business owner who can't seat clients in inclement weather or even some seasons, depending on geography. This product provides total weather protection, including protection from rain, snow, sleet and even cold weather. Many businesses will even provide heat behind this product and create a usable outdoor space year round.

Any rollscreens with vinyl fabric over 198" will be prompted to use the SA track system and the HD bottom bar. In addition, it is also recommended to use keder for added optimal support in environments that experience slight winds (> 35 mph).

These rollscreens should not be operated to the bottom position during any winds higher than 35 mph and if left down in high winds, the screen is subject to damage from debris and will not be covered under warranty, categorized "Act of God" stated in our Dealer Warranty Policy.

It is recommended that a vinyl screen of any size be brought up and back into the housing during high wind situations to avoid these issues. Commercial application, as stated above, allows protection to customer with the understanding of risk to exposed material in inclement weather conditions.

## Installation

When a vinyl rollscreen is ordered, it should be installed no later than a week after delivery to avoid "memory" of the material causing excessive wrinkles to occur on vinyl that will tarnish its appearance. In addition to this, if the screen is configured to have clear vinyl welded to clear vinyl or if there are weblon borders between clear vinyl sheets, the wrinkle patterns will be inconsistent.
